

calgodip T-HEXX® Dry

The closer

Properties:

calgodip T-HEXX® dry is a ready-to-use, long-lasting sealant that protects teats during drying. The application should be carried out for the first time 7-10 days and then again 3-5 days before calving. calgodip T-HEXX® dry remains on the teat skin for up to 4 days and in the milk channel for up to 6 days and is compatible with the antibiotics used during drying.

Application:

After complete milking, clean the entire udder, especially the teats (e.g. with calgonit udder paper), then dip the teats in calgodip T-HEXX® dry. Put on gloves during use.

- ✓ Ready-to-use product
- ✓ Protects against harmful environmental influences
- ✓ Quickly drying
- ✓ Antibiotics remain locked in
- ✓ Blue colouring facilitates the identification of the dry animals

Active agents:

Alcohols, film formers, food colourants
